

HOLYROOD VOTING INTENTIONS POLL

published 1 April 2007

A poll was conducted by TNS System Three to establish current voting intentions in Scotland in relation to the Scottish Parliament.

The results of this poll were published on 1st April 2007.

TNS System Three is a member of the British Polling Council (BPC) and abides by its rules. We also operate within the Code of Conduct of the Market Research Society (MRS). In accordance with these rules the following information is provided:

Sample size	996
Sampling points	44
Fieldwork dates	20 – 27 March 2007
Interview method	Face-to-face, in-home.
Population sampled	All adults aged 18+ in Scotland.
Sampling method	The poll was conducted through our Omnibus, Scottish Opinion Survey. For this survey, a sample of constituencies is selected to be representative of Scotland geographically and by party of current first-vote MSP. Within each constituency, a quota sampling method is used for respondent selection.
Data weighting	Data are weighted to the profile of all adults aged 18+ in Scotland, based on population profile estimates from the National Readership Survey. Weighting is carried out in relation to working status within gender, age, social grade and electoral region. Unweighted and weighted bases are shown at the top of each computer table.
Voting intentions	Two tables are supplied for the measure of voting intentions. The first of these is based on all respondents and shows the percentages 'uncommitted' – i.e. who are either undecided, refuse to state how they might vote, or say that they will not vote at all. The second table excludes this 'uncommitted' group and re-percentages party support based on all those naming a party. It is these latter figures which are published as the measure of voting intentions. Any additional questions to assess commitment to vote and to filter responses further based on committed voters are only asked in pre-election polls.
Questions	The computer tables show question wording in full.
